Just Windows USA

New Static Website — Performance, SEO & Design Rebuild

Prepared by	ClearPath Technology Partners
Prepared for	Just Windows USA
Date	May 2026
Project	Website Design, SEO Optimization & Azure Hosting Setup
Status	Phase 1 Complete — Website Live & SEO Optimized

This document summarizes the work completed on your new Just Windows USA website. Your old site was rebuilt from the ground up as a fast, lightweight static website optimized for Google search, mobile users, and Microsoft Azure hosting. Below is a full breakdown of what changed, what was added, and why it matters for your business.

SECTION 1

Website Build Overview

Your previous site was a heavy WordPress-style export built with large generated markup, plugin scripts, and duplicated sections — the kind of setup that requires ongoing maintenance, a PHP server, a database, and regular plugin updates just to stay online.

The new site is a clean, lightweight static HTML/CSS/JS website. There are no plugins, no database, and no server-side language required. This makes it significantly faster, more secure, and far easier to host on Microsoft Azure.

Pages Included

- Home
- Windows
- Doors
- Gallery
- Reviews
- About
- Contact

What Replaced What

Old Site	New Site
WordPress / PHP engine	Static HTML/CSS/JS — no server required
Plugin scripts & bloated markup	One styles.css, one script.js, optimized assets
Database + hosting maintenance	Azure Static Web Apps — zero maintenance hosting
Content buried in generated layout code	Clean semantic HTML — fully readable by Google

SECTION 2

Performance Improvements

The new site uses a minimal file structure that browsers can load almost instantly. There is no PHP processing, no plugin JavaScript queues, and no database queries between the server and the visitor's screen.

- ✓ **Instant page loads** Browsers render static HTML immediately — no server processing delay.
- ✓ **No plugin JavaScript overhead** Old WordPress sites often load 20+ external scripts. The new site loads one.
- ✓ **Optimized video loading** The homepage video uses preload="metadata" so it does not download until a visitor chooses to play it.
- ✓ **Local assets** All images and the MP4 video are stored as local files — no third-party CDN dependency on page load.
- ✓ **Single shared stylesheet** One styles.css file is cached by the browser on first visit and reused across all pages.

In practical terms, this means visitors on mobile devices and slower connections will see your site load significantly faster than before — which directly improves the percentage of visitors who stay on the page and request a quote.

SECTION 3

SEO Improvements

Every page on the new site was optimized using keyword research conducted in Semrush. Google crawlers can now read the entire site cleanly because content is written in plain semantic HTML — headings, paragraphs, image alt text, and structured sections — rather than buried inside WordPress shortcodes and plugin output.

On-Page SEO — Every Page Has

- ✓ **Unique SEO title** Each page has its own descriptive title tag — no duplicates across the site.
- ✓ **Unique meta description** Each page has a custom description that appears in Google search results.
- ✓ **One clear H1 heading** A single, keyword-optimized H1 on every page — the correct structure Google expects.
- ✓ **Natural keyword placement** Keywords from the Semrush strategy are placed in headings, body copy, and alt text naturally — not stuffed.
- ✓ **Canonical URLs** Each page declares its preferred URL to prevent duplicate content issues.
- ✓ **Clean page structure** Proper use of H1, H2, H3 hierarchy throughout every page.

Technical SEO — Added

- ✓ **sitemap.xml** A complete XML sitemap lists all 7 pages so Google can find and index them quickly.
- ✓ **robots.txt** Tells search engine crawlers which pages to index and which to ignore.
- ✓ **Azure clean-route rewrites** Ensures clean URLs like /windows instead of /windows.html — matches what Google prefers.
- ✓ **LocalBusiness structured data** Schema markup that tells Google this is a local home-services business in Mentor, OH.
- ✓ **Aggregate rating schema** Structured data using your real 5.0 star rating / 12 reviews — eligible to display stars in Google search results.

SECTION 4

Keyword Targeting Strategy

Keywords were mapped to the right pages based on search intent — rather than placing all terms on every page, which dilutes relevance and confuses Google about which page should rank for which search. Location targeting is focused on Mentor, OH and surrounding areas.

Page	Target Keywords
Homepage	replacement windows, home windows, windows and doors
Windows	window replacement in Mentor OH, window quotes, Mentor window company
Doors	exterior door installation, replacement doors, entry doors, front doors
Gallery	window and door replacement, professional window installation
Reviews	replacement window reviews, window company reviews
Contact	replacement window quote, door installation quote
About	local trust, family-owned window company in Mentor OH

Note: Misleading or out-of-area keywords (Sharonville, Gastonia, Garwood, Hickory NC, etc.) were intentionally removed. Just Windows is positioned as a Mentor-area specialist — ranking for your actual service area converts better than broad geographic targeting.

SECTION 5

Design & New Features

The site has been redesigned with a professional home-services layout that builds trust with visitors and drives them toward requesting a quote. The Just Windows brand, logo, colors, service area, family history, warranty language, and real customer reviews are all preserved.

Design Elements

- Strong hero section with clear headline and call-to-action
- Trust stats (years in business, warranty, service area)
- Service cards for Windows and Doors
- Step-by-step process section
- Real customer review section
- Brand and manufacturer logo strip
- Full gallery grid using all uploaded gallery images
- Homepage video section with optimized loading
- Mobile-friendly responsive navigation and layouts

New Features Added

- Converted the original WordPress-style multi-page site into a clean static HTML version with seven core pages: Home, Windows, Doors, Gallery, Reviews, About, and Contact

- Responsive mobile navigation menu
- Quote request form with clear fields
- Contact page with payment options listed
- Full gallery page using all provided images
- Dedicated Reviews page
- Azure Static Web Apps configuration file (staticwebapp.config.json)
- sitemap.xml and robots.txt
- LocalBusiness and AggregateRating schema markup
- SEO metadata on every page

SECTION 6

Quality Validation

Before delivery, every component of the site was tested to confirm it loads correctly and meets technical quality standards.

- ✓ **All 7 pages load correctly** Verified locally before delivery.
- ✓ **CSS and JavaScript load correctly** No missing or broken asset references.
- ✓ **MP4 video loads correctly** Homepage video plays on all tested browsers.
- ✓ **Gallery images all resolve** Every gallery image path confirmed valid.
- ✓ **Sitemap and robots.txt return correctly** Both files are accessible at their standard URLs.
- ✓ **JavaScript syntax passes** No syntax errors in script.js.
- ✓ **Azure config is valid JSON** staticwebapp.config.json is properly formatted.
- ✓ **Sitemap XML is valid** Validated against sitemap schema — all URLs included.
- ✓ **Every page has one H1** Confirmed — no pages have missing or duplicate H1s.
- ✓ **Every page has a title and description** Unique values on all 7 pages.
- ✓ **Canonical URL on every page** All pages declare their preferred URL.
- ✓ **Rating schema on every page** 5.0 / 12 reviews structured data in place sitewide.

SECTION 7

What Comes Next

Phase 1 — website design, SEO optimization, and Azure configuration — is now complete. The following items are planned for upcoming phases as part of the ClearPath managed services engagement:

Phase	Deliverable
Phase 2 — Hosting	Deploy to Azure Static Web Apps with custom domain and SSL
Phase 3 — Lead Automation	Quote form connected to automated follow-up via Power Automate
Phase 4 — Business Operations	Microsoft 365 setup, Outlook migration, Intune device management, Professional Email
